

Reflecting on Reflectors

Last month's *Salamander News* got us thinking that we haven't had an issue focusing on reflectors since...never. I guess it's about time. What tipped us off is that we didn't get a tremendous response to the *test of knowledge* on product codes last month. We realized then, that we've made several changes in our reflectors and some of those changes can't be found in our brochure. We have reflectors for sale in two basic styles:

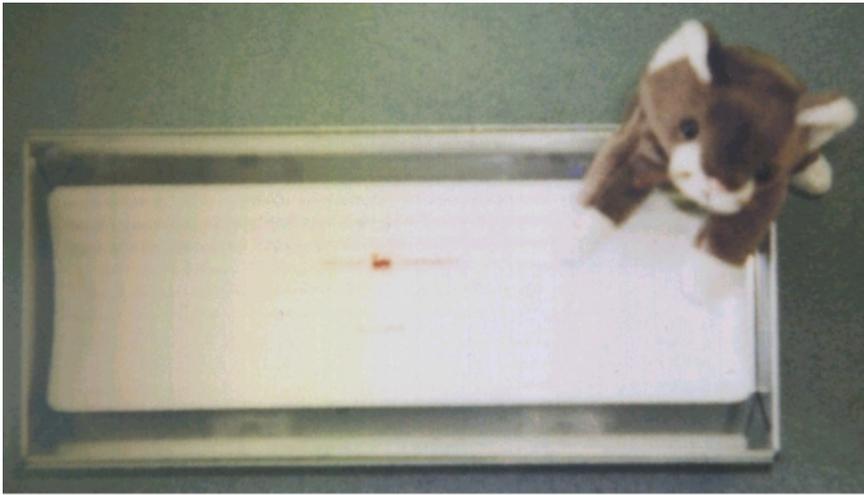

The basic reflector-only **SWB/R/A**

This reflector is made in 6 different lengths to hold one half size emitter up to 5 full size emitters. It would most commonly be used in situations where a case or outer backing or oven enclosure was already in place. The reflector-only is used where multiple fixtures are needed. Wiring them together is simplified because of the open nature of their design. The reflector-only fixtures are priced for function rather than visibility.

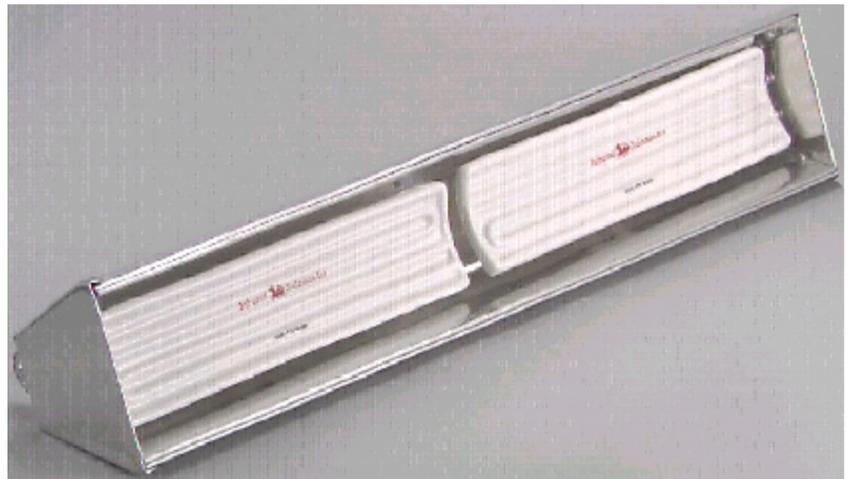

The **SWB** reflector comes with an outside case allowing it to be used inclusively if needed. The units are pre-wired and only need to be fitted with the element(s). As with the SWB/R/A/ they are made to hold one half size emitter or up to 5 full size emitters.

The **SWB/L** was designed specifically to hold from 1-4 of the LTE emitters. These are considered complete assemblies with the exception of the pilot light. Don't forget that LTE emitters are also available in groups of 3 elements in our 1' X 1' CRP panel.

Our sauna reflector **SWB/2/S** is specifically designed for use in saunas. It is a completely unit without the pilot light. Most of these reflectors are used in conjunction with our sauna control which gives a complete operational readout eliminating the annoying glare a pilot light might make in a dimly lit sauna.

Looking For a Few Good Heads

Take another look at the information above. You may want to dig out last month's issue (you can find it on our website at www.InfraredHeaters.com/acrobat/ir701.pdf) and fill out the test with your new found knowledge. We have a lot of great hats waiting to fit on some great heads. Yours might as well be one of them.
